

PROGRESS NOTE · Day 4

Date: 2024-11-06

Patient: Margaret Chen MRN: 002-456-789

Author: Dr. C. Patel (Covering)

NOTE: This is a covering physician's note.

Assessment:

1. Primary diagnosis: Community-acquired pneumonia · patient appears to have respiratory symptoms. Started on IV amoxicillin-clavulanate.

Note: [This conflicts with Dr. Williams' assessment of UTI as primary diagnosis]

2. INR 2.6 · back in range. Restarting warfarin at 3mg daily (reduced from 5mg).
Reason: INR was supratherapeutic, dose reduction appropriate.

3. Urine culture: PENDING · still awaiting result.

4. Blood culture: PENDING · sent on Day 2 due to persistent low-grade fever.
